

Project Outline: Virtual Meeting Room Setup & A/V Integration

Project Title: Conference Room Virtual Meeting System Deployment & Integration (Meeting Owl 3 with Microsoft Teams)

1. Project Objective:

- Purpose: To successfully deploy and integrate a Meeting Owl 3 virtual meeting system with a Windows 11 laptop and a display (TV) to facilitate seamless online conferences for internship participants using Microsoft Teams.
- Problem Solved: Enabled users at the Aviation building to conduct and participate effectively in virtual meetings via Microsoft Teams with high-quality 360-degree audio and dynamic video, addressing the need for robust remote collaboration tools.

2. Tools & Technologies Used:

- Operating System: Windows 11 (32-bit)
- Meeting System: Meeting Owl Pro 3 (360-degree camera, mic, speaker)
- Display: Television (TV)
- Connectivity: HDMI cable (for laptop to TV), USB cable (for Meeting Owl to laptop)
- Conferencing Software: Microsoft Teams
- Workstation: Laptop computer

3. Detailed Steps Performed:

- A. Initial Assessment & Cabling:
 - "Upon arrival at the conference room in the Aviation building, I assessed the available ports on the Windows 11 laptop (e.g., identifying available USB ports and HDMI output)."
 - "Identified the designated television (TV) for display and located its available HDMI input ports."
 - "Positioned the Meeting Owl 3 central to the meeting table to optimize its 360-degree audio and video capture capabilities for all participants."
 - "Connected the Meeting Owl 3 to the Windows 11 laptop using its supplied USB cable, ensuring a secure connection."
 - "Connected the Windows 11 laptop to the television using a standard HDMI cable, plugging one end into the laptop's HDMI output and the other into an available HDMI input on the TV."

B. Display Configuration:

- "Accessed the Windows 11 display settings on the laptop (e.g., by right-clicking on the desktop and selecting 'Display settings' or using the Windows + P shortcut)."
- "Configured the display mode to 'Extend' or 'Duplicate' (specify which was chosen and why, e.g., 'Extended' to allow presentation on TV while keeping notes on laptop, or 'Duplicate' to mirror the laptop screen exactly)."
- "Ensured the TV displayed the laptop's output correctly, confirming the correct HDMI input was selected on the TV."

C. Meeting Owl Integration within Windows 11 & Microsoft Teams:

- "Verified the Meeting Owl 3 was recognized by the Windows 11 laptop (e.g., 'Checked Device Manager for successful installation of the Meeting Owl as an audio and video device')."
- "Accessed the Sound settings within Windows 11 (e.g., 'Settings > System > Sound') and verified the Meeting Owl's microphone and speaker were listed as available input and output devices."
- "Set the Meeting Owl's speaker as the default playback device and its microphone as the default recording device within Windows Sound settings to ensure all meeting audio and input would route through the Owl."
- "Adjusted audio levels for both playback and recording to optimal settings to prevent echoes or low volume."
- "Launched Microsoft Teams on the laptop to configure the meeting devices."
- "Navigated to Teams 'Settings' (usually via the user profile picture in the top right) and then to 'Devices'."
- "Within Teams' Device settings, selected 'Meeting Owl 3' as the primary Camera, Microphone, and Speaker to ensure Teams utilized the integrated Meeting Owl hardware."

D. Functional Testing:

- "Conducted a comprehensive test of the setup by launching a dummy virtual meeting session or a test call within Microsoft Teams."
- "Verified video output was clearly displayed on the TV."
- "Confirmed 360-degree audio input was being captured by the Meeting Owl by speaking from various positions around the table and observing audio indicators within the Teams meeting interface."
- "Ensured audio playback from the Teams meeting was routed correctly through the Meeting Owl's speaker."

4. Outcome & Impact:

- "Successfully deployed and configured the Meeting Owl 3 system for Microsoft Teams, transforming the conference room into a fully functional virtual meeting environment."
- "Enabled approximately [mention number of interns/users, if possible, or 'all participating interns'] to seamlessly join and actively engage in online meetings with high-fidelity audio and dynamic 360-degree video via Microsoft Teams."
- "Provided essential technological support for internship collaboration, contributing to effective remote communication and learning."

5. Skills Demonstrated:

- Audio/Visual (A/V) Systems Setup
- Peripheral Installation & Configuration
- Display Configuration & Troubleshooting (Basic)
- Operating System Configuration (Windows Sound & Display Settings)

- Microsoft Teams Configuration & Integration
- Virtual Meeting System Integration
- Functional Testing & Verification
- Attention to Detail
- User Support (indirectly, by setting up the environment for them)
