

Revised Project Outline: IT Hardware Lifecycle Management - Monitor Replacement & Asset Disposition (Physical Focus)

Project Title: Workstation Display Upgrade: Physical Dual Monitor Replacement and Asset Return

1. Project Objective:

* Purpose: To upgrade a user's workstation display setup by physically replacing two existing monitors with two new Dell 24-inch monitors, and meticulously following procedures for the return of the old equipment.

* Problem Solved: Provided larger, newer display hardware to the user and ensured correct physical disposition of retired IT assets, contributing to accurate inventory and responsible hardware management.

2. Tools & Technologies Used:

* Operating System: Windows 11 Desktop PC (as the user's workstation - though no OS configuration was performed in this specific task).

* New Hardware: Two Dell 24-inch monitors.

* Old Hardware: Two grey 23-inch HP monitors.

* Cables: Existing or new video cables (HDMI, DisplayPort) and power cables.

* Documentation: Asset tracking forms/procedures (conceptual, for returning old equipment).

3. Detailed Steps Performed:

- * A. Initial Assessment & Preparation:
 - * "Coordinated with the user (Sgt.) to schedule the monitor replacement, ensuring minimal disruption to their work."
 - * "Unboxed and prepared the two new Dell 24-inch monitors for installation, ensuring all necessary cables and stands were present."
 - * "Noted the asset tags and serial numbers of the new Dell monitors for future record-keeping and inventory updates."
- * B. Disconnecting & Removing Old Monitors:
 - * "Safely powered down the user's desktop PC and the two old HP 23-inch monitors."
 - * "Carefully disconnected all video cables (e.g., HDMI, DisplayPort, DVI, VGA - depending on the old monitors' connections) and power cables from the old HP monitors and the desktop PC."
 - * "Detached the old HP monitors from their stands (if applicable) and physically removed them from the user's desk."
 - * "Identified and recorded the asset tags and serial numbers of the two grey 23-inch HP monitors for return purposes, ensuring accurate documentation of decommissioned assets."
- * C. Installing New Monitors:

- * "Positioned the two new Dell 24-inch monitors on the user's desk, ensuring stable and ergonomic placement."
- * "Connected the appropriate video cables (primarily HDMI and/or DisplayPort) from the desktop PC's video output ports to the corresponding input ports on each of the new Dell monitors."
- * "Connected the power cables for both new Dell monitors to available power outlets or a surge protector."
- * "Powered on the new monitors and the desktop PC."
- * D. Functional Verification (Physical Level):
 - * "After powering on, visually confirmed that both new Dell monitors were receiving a signal and displaying an image from the desktop PC (e.g., showing the Windows login screen or desktop)."
 - * "Ensured the monitors powered on correctly and displayed a basic output, verifying fundamental connectivity."
- * E. Asset Return Procedure:
 - * "Carefully packaged the two removed grey 23-inch HP monitors, ensuring they were protected for transport and storage."
 - * "Adhered to established IT asset disposition procedures by documenting the return of the HP monitors, including their serial numbers and asset tags, into the appropriate system."
 - * "Transported the decommissioned HP monitors to the designated supervisor for proper return and inventory update, as per organizational policy."

4. Outcome & Impact:

* "Successfully physically replaced two older HP monitors with two new Dell 24-inch displays on a user's workstation, providing updated display hardware."

* "Ensured proper IT asset lifecycle management by systematically decommissioning, documenting, and returning outdated equipment to the supervisor, contributing to accurate inventory control and responsible hardware disposition."

* "Provided the foundation for an improved visual workspace, ready for subsequent configuration by another IT team member or the user."

5. Skills Demonstrated:

- * Hardware Installation & Replacement (Monitors)
- * Physical Cabling & Connectivity
- * IT Asset Management & Disposition Procedures
- * Adherence to Standard Operating Procedures
- * Attention to Detail
- * Workstation Preparation
- * Logistics & Organization
