

IT Hardware Refresh Program: Workstation Monitor Lifecycle Management

This project will allow you to discuss the systematic replacement of monitors due to the 4-5 year refresh cycle. You can use the "ACC monitors" as an example of the types of monitors you installed during this program.

Here's how we can outline this project:

Project Outline: IT Hardware Refresh Program - Workstation Monitor Lifecycle Management

Project Title: IT Hardware Refresh Program: Workstation Monitor Lifecycle Management and Deployment

1. Project Objective:

- * Purpose: To systematically update and replace aging workstation monitors across the organization as part of a routine IT hardware refresh program (typically every four to five years), ensuring users consistently have modern, reliable display equipment.

- * Problem Solved: Proactively mitigated hardware failures, improved display technology, and maintained user productivity by replacing monitors at the end of their operational lifecycle, aligning with organizational refresh policies.

2. Tools & Technologies Used:

- * Operating System: Windows 11 Desktop PCs (the standard workstations receiving new monitors).

- * New Hardware: Various models of new monitors deployed during the refresh cycle, including specific instances of "ACC Monitors" (e.g., specific sizes or models like "ACC 27-inch LED Monitors").

- * Old Hardware: Existing monitors being decommissioned (e.g., various brands and sizes reaching end-of-life).

- * Cables: HDMI, DisplayPort cables (standard for new installations), and associated power cables.

- * Logistics: Asset tracking system (conceptual, for tracking old/new assets), packaging materials for old equipment.

3. Detailed Steps Performed:

- * This section describes the recurring process you followed.
 - * A. Pre-Deployment Planning & Asset Identification:
 - * "Participated in the ongoing IT hardware refresh program, focusing specifically on workstation monitors slated for replacement due to their 4-5 year lifecycle."
 - * "Identified target workstations for monitor replacement based on refresh schedules or specific user requests."
 - * "Prepared new monitors (e.g., ACC Monitors) for deployment, including unboxing and assembling stands as needed."

- * "Documented new monitor asset tags and serial numbers for inventory updates."
- * B. On-Site Monitor Replacement (Physical Installation):
 - * "Coordinated with end-users to schedule monitor replacement, minimizing operational disruption."
 - * "Safely powered down the user's desktop PC and the old monitors."
 - * "Carefully disconnected all video and power cables from the old monitors and the desktop PC."
 - * "Physically removed the old monitors from the user's desk, documenting their asset tags and serial numbers for decommissioning."
 - * "Positioned the new monitors (e.g., ACC Monitors) on the user's desk, ensuring optimal ergonomic placement and stability."
 - * "Connected the appropriate video cables (HDMI, DisplayPort) from the desktop PC's video output ports to the new monitors, along with their power cables."
 - * "Organized cabling for a clean and professional setup."
- * C. Basic Functional Verification (Post-Installation):
 - * "Powered on the newly installed monitors and the desktop PC."
 - * "Visually confirmed that the new monitors were receiving a signal and displaying an image from the desktop PC."
 - * "Ensured the monitors powered on correctly and displayed basic output, verifying fundamental physical connectivity."
 - * "Quickly confirmed dual-monitor extension or proper display detection in Windows Display Settings if this was a new multi-monitor setup."
- * D. Asset Decommissioning & Return:
 - * "Packaged the decommissioned monitors, ensuring they were ready for transport and adherence to environmental disposal guidelines if applicable."
 - * "Updated the asset management system (or relevant records) to reflect the retirement of the old monitors and the deployment of the new ones."
 - * "Transported the old monitors to the designated IT storage or surplus area for proper disposition (e.g., return to supervisor/logistics, recycling)."

4. Outcome & Impact:

* "Contributed to the organization's ongoing IT hardware refresh program by systematically deploying new workstation monitors and decommissioning outdated equipment."

* "Ensured consistent access to reliable and modern display technology for end-users, proactively preventing hardware failures and enhancing productivity."

* "Maintained accurate IT asset inventory by diligently tracking monitor replacements and adhering to lifecycle management policies."

5. Skills Demonstrated:

- * IT Asset Lifecycle Management
- * Hardware Refresh & Deployment
- * Physical Hardware Installation (Monitors)
- * Peripheral Setup & Cabling
- * Adherence to Standard Operating Procedures (SOPs)
- * Logistics & Inventory Documentation
- * Proactive Problem Prevention
- * Attention to Detail
- * User Coordination & Support
